The architects guide to designing your new build home

Three architects talk to Grainne Rothery about how to plan a home that will work, be loved and last for years — now and in the future

Finding the perfect site and getting the right team to help you design your home are just part of you're planning to build your dream home. But what will it look like and how will it work for you now and in the future?

James Crowley, of Kirby + Crowley Architects in Dublin, says that when you're building a home, you have to be thinking about how it will work for you at the present — and not just in terms of the here and now, but also in the future when children have moved on.

"It's a good balance between many kids at home now, and a few years down the line when they're off to college and you're left with a big house that you don't need," he says. "So think a bit longer in your head and see how the house could work for you. The best houses make a big difference to the end, and they're not necessarily more expensive — and everything else that goes with that."

There are plenty of ways of reducing the energy bills in your home, but it's also practical about the size of kitchens because they're the most expensive rooms in the house to fit out at the same time. The rooms can be a lot smaller than you think, he says, and the fridge stays the same.

"Kitchens are very expensive, and you can spend a lot of money on them," he says. "Some people want to fit out a kitchen that's the size of a restaurant kitchen, but you don't need that. You're not a restaurant. You're not cooking for 50 people. You're cooking for your family. So you don't need a huge island, you don't need a huge fridge, you don't need a huge cooker. You need a kitchen that's functional for you."

Examples of Northcliff McCann projects that Crowley's team has worked on include a house in Milltownhall, Co Dublin, on a site that's a challenging shape, and a house in Ballsbridge, Dublin, that's been designed to maximise the light from the road. Clad in black charred larch and zinc, it's a modern take on the traditional Irish cottage, with a pitched roof and a chimney at one end. Belfast, Silver Rock House, also on a challenging site, is a modern take on the Irish seaside home clothing. Built in Portstewart, it's clad in timber and zinc and has a pitched roof and interior elements that are hard to design — the flooring, the bathrooms and the kitchen, for example — that will last for years. "It's a very simple house, but it's very well thought out in making the place inverted."

Kirby + Crowley also take an important consideration — the sun's position. "We're very conscious of the sun and how it moves around the site," he says. "We always look at where the sun is, and we use it quite a lot. We're very conscious of the sun and how it moves around the site, and we use it a lot. Usually, it's kept to the back of the house."

Wilson agrees that natural fixtures are a better choice for a home, and that you can't go wrong for a bespoke timber for a better result. "Timber is a very natural material, and it's very warm and it's very inviting," he says. "It's a very good material to work with, and it's very versatile. It's very easy to work with, and it's very good for the environment as well."

Wilson says that he's also a fan of using timber for windows and doors, and that it's a good choice for a bespoke timber for a better result. "Timber is a very natural material, and it's very warm and it's very inviting," he says. "It's a very good material to work with, and it's very versatile. It's very easy to work with, and it's very good for the environment as well."

Finally, if you really do want to build a home that's truly unique, you can't go wrong by using the services of an architect.
